ENP RACING TEAM

Ranking System

Purpose: provide a fair, evidence-based ranking of member contribution while protecting members from penalties caused by missing data, validated blockers, or excused absences.

1. The 4 scored parts

PART	WEIGHT	WHAT IS MEASURED
1. Delivery	**55%**	Quality and timing of tasks done, and the amount of work carried
2. Presence	**15%**	Attendance at mandatory sessions
3. Reliability	**15%**	Regular, meaningful follow-up in the ERP and communication of progress and blockers
4. Team Contribution	**15%**	Useful help, problem solving, knowledge sharing and initiatives beyond assigned tasks, plus workshop and events. Logistics and exceptional effort are bonus-only.

FINAL SCORE FORMULA

Final score = 0.55 × Delivery + 0.15 × Presence + 0.15 × Reliability + 0.15 × Team Contribution

All components are out of 100 before weighting. If a component is not calculable because of insufficient data, its weight is redistributed proportionally among the other valid components.

1.1 Scoring period

The scoring period is **one calendar month**. Every formula in this document is calculated on the records of that month.

RULE	DEFINITION
Period close	The period closes on the last day of the month. Scores are published within 7 days.
Task counted when	A task is scored in the month in which it is closed with evidence.
Task still open at month end	Not scored yet; it carries over. Exception: a task already overdue by more than 50% of its planned duration is scored in that month as *Not delivered*. If it is delivered later, that entry is replaced by its real score (timing factor 0.2) and the earlier month is recalculated.
Monthly score	The Final score of the month. Used for feedback and follow-up.
Ranking score	The average of the member's last three calculable Monthly scores. Ranking and categories (section 7) use this score, so one bad month does not decide a category.

2. Single rating scale

Every criterion marked out of 5 in this system (Communication of progress and blockers, and the Team Contribution criteria) uses the same scale. The mark is converted to a score out of 100 before weighting.

Score /100 = Mark /5 × 20

MARK /5	SCORE /100	INTERPRETATION
0	0	None: the member had the opportunity, and nothing was done or there is no evidence.
1	20	Very weak: very limited contribution.
2	40	Insufficient: partial or hardly usable contribution.
3	60	Acceptable: correct contribution, but can be improved.
4	80	Good: clear and useful contribution.
5	100	Excellent: strong, verifiable and useful contribution.

2.1 N/A versus 0

N/A means the member had no real opportunity to contribute on that criterion during the period. **0** means the opportunity existed and the member did not take it. The two must never be confused.

GIVE N/A WHEN	GIVE 0 WHEN
No event took place in the month, or none was open to the member.	Events were open to the member, who did not take part.
The member's role is remote or has no workshop access, as recorded in the ERP.	The member has workshop access and never came.
The member was on excused absence for the whole period.	The member was available and nothing was done.

The assessor records the reason for every N/A in the ERP. An N/A criterion is removed from the calculation and its weight is redistributed; it gives neither penalty nor bonus.

3. Part 1 — Delivery (55%)

Each task is created before work starts with a locked point value, deliverable, success criteria, start date, deadline and responsible member. The Department Head sets or approves the point value and the deadline; a member cannot set their own. Planned duration is the time from start date to deadline.

TASK POINTS

POINTS	LEVEL	MEANING
1	Routine	Normal task with limited project impact.
2	Important	Useful task requiring meaningful effort or responsibility.
3	Complex	Technically or organisationally demanding task.
4	Critical	Task with significant project impact or important dependency.
5	Project-critical	Task essential to a major milestone, competition objective, or blocking several other activities.

> **Locked.** Task points and deadlines are locked once work begins. Points cannot be increased after completion because the task turned out to require more effort. A deadline moves only through a validated blocker (section 5.1).

3.1 Quality mark

QUALITY MARK	MEANING	QUALITY FACTOR
0	Unusable or rejected	0.0
1	Major rework: more than 50% to redo	0.2
2	Significant rework: 30–50%	0.4
3	Corrections needed: 10–30%	0.6
4	Minor corrections: under 10%	0.8
5	Ready to use; nothing significant to redo	1.0

Quality factor = Quality mark ÷ 5

3.2 Delivery timing

TIMING	TIMING FACTOR
Early: submitted before the deadline by at least 15% of planned duration (minimum 1 day), and quality mark 4 or 5	1.1
On time, or late because of a validated blocker	1.0
Late by up to 25% of planned duration	0.8
Late by up to 50%	0.5
Late by more than 50%	0.2
Not delivered	0

Short tasks. To calculate lateness, planned duration is counted as at least 7 days. A 2-day task delivered 1 day late is therefore 14% late (factor 0.8), not 50% late.

The early bonus is deliberately small and conditional. Early work that needs real corrections (quality 3 or below) is scored as on time, so perfect on-time work (1.0) always beats rushed early work.

3.3 Performance score

Task score = Quality factor × Timing factor
Performance score = min (100 ; [Σ (Task points × Task score) ÷ Σ Task points] × 100)

The Performance score says how well the member delivered what they took on. It does not say how much they took on; that is the Load score.

3.4 Load score

Delivered points = Σ (Task points × Quality factor) over tasks closed in the period
Load score = min (100 ; Delivered points ÷ Reference load × 100)

RULE	DEFINITION
Reference load	The median of Delivered points among the members of the department in the period. Departments with fewer than 4 members use the team-wide median.
Reduced availability	The Reference load is reduced in proportion to the member's excused weeks (exams, illness, family emergency, official mission).
No work available	If the member asked for more work in the ERP and none was assigned, the Department Head validates it and the Reference load is reduced to the points the member was actually assigned.
Timing	Not used here. Lateness is already penalised in the Performance score.

3.5 Delivery score

> **Delivery score = 0.70 × Performance score + 0.30 × Load score**

If no task was closed in the period and none is counted as not delivered, Delivery is not calculable and its weight is redistributed.

4. Part 2 — Presence (15%)

Mandatory sessions are flagged in the ERP in advance and cannot be added afterwards. The member checks in at the start; the organiser confirms the attendance.

SESSION WEIGHT

SESSION TYPE	WEIGHT
Normal meeting	**1**
Critical session: test day, competition preparation, event, trade show, etc.	**2**

ATTENDANCE STATUS

STATUS	VALUE
Present on time: check-in within 10 min	**1**
Late, or left before halfway point	**0.5**
Unexcused absence	**0**
Excused absence	**Removed from calculation**

> **Presence score = [Σ (session weight × status value) ÷ Σ session weights] × 100**

Excused absences include exams, illness, family emergency and official team missions. They are removed from the denominator: they give neither penalty nor bonus. If the member had no mandatory session in the period, Presence is not calculable.

5. Part 3 — Reliability (15%)

Reliability measures whether the team can continuously see the real status of a member's work. It does not repeat deadline penalties already counted in Delivery.

CRITERION	WEIGHT	HOW IT IS MEASURED
Update rate	**50%**	ERP data: weeks with a meaningful update compared with weeks with a task in progress
Communication of progress and blockers	**50%**	Mark /5 from the assessor, based on the ERP record (updates, declared blockers, alerts)

The update rate is a basic hygiene check that most members will meet. The Communication mark separates members more. The two carry equal weight.

5.1 Communication of progress and blockers

Evidence rule: a task cannot close without evidence. Evidence may include a validated file, CAD model, test result, report, photo, code commit, meeting output, or other appropriate proof.

Blockers must be declared in the ERP within 2 working days of becoming known. Once validated by the Department Head, the affected deadline is frozen and the blocker does not count as member delay. A blocker should contain the cause, affected task, date reported, severity, dependency and required action.

MARK /5	DEFINITION
0	Does not communicate progress or blockers.
1	Communicates only after being reminded.
2	Irregular or late communication.
3	Acceptable communication on progress.
4	Communicates progress, delays and needs clearly.
5	Proactive communication with alerts, solutions and regular follow-up.

LATE BLOCKERS

A blocker is late when it is declared more than 2 working days after becoming known, without a valid reason. The cap applies to the Communication mark of the period in which the blocker was declared, and only to that period.

LATE BLOCKERS IN THE PERIOD	MAXIMUM COMMUNICATION MARK
None	**5**
One	**4**
Two or more, or more than half of the blockers the member declared	**2**

> **Update rate = Weeks with at least one meaningful ERP update ÷ Weeks with a task in progress × 100**
> **Communication score = Communication mark /5 × 20**
> **Reliability score = 0.50 × Update rate + 0.50 × Communication score**

If no Communication mark is given for the period, Reliability = Update rate. If there are no weeks with tasks in progress, Reliability is not calculated rather than automatically assigning 0.

5.2 What is a meaningful update?

A meaningful update may be a status change, progress milestone, new evidence, useful comment, declared blocker, or clear next action. A generic comment with no new information (for example, only “still working”) does not count.

Which weeks are counted. A week counts as “task in progress” when the member had at least one assigned task that had started and was not yet closed during that week. Other weeks are left out, so they never reduce the score.

Which weeks are “updated”. One meaningful update is enough for the week to count as updated; more updates in the same week add nothing.

6. Part 4 — Team Contribution (15%)

This part measures contribution beyond the member's normal assigned tasks. It has three scored criteria and two bonuses.

CRITERION	WEIGHT	HOW IT IS MEASURED
Contribution points: help, problem solving, knowledge sharing, initiatives	**55%**	Points recorded in the ERP (table below)
Useful workshop contribution	**25%**	Mark /5 (scale 6.1)
Event engagement and representation	**20%**	Mark /5 (scale 6.2)
Logistics support	**Bonus, up to +10**	Mark /5 (scale 6.3)
Exceptional effort	**Bonus, up to +10**	Mark /5 (scale 6.4)

CONTRIBUTION POINTS

POINTS	CONTRIBUTION
1	Small help or small useful idea adopted
2	Significant help, meaningful knowledge sharing, or an idea adopted by the team
3	Major help, major problem solving, or an initiative with verified project benefit

Contribution points are proposed by the member or the person helped, and validated by the Department Head with an ERP record.

> **Points score = min (100 ; Points in the month ÷ 6 × 100)**
> **Base score = 0.55 × Points score + 0.25 × Workshop score + 0.20 × Events score**
> **Bonus = 2 × Logistics mark + 2 × Exceptional effort mark**
> **Team score = min (100 ; Base score + Bonus)**

If Workshop or Events is N/A for the member in the period (section 2.1), Base score = Σ (weight × score) ÷ Σ weights of the applicable criteria. Contribution points are always applicable. A bonus that is not given counts as 0 and never lowers the score.

> **Why bonuses.** Logistics and exceptional effort depend partly on having a car, money or free time. As bonuses they still recognise the members who give them, without lowering the score of members who cannot.

Only contributions beyond the member's own assigned tasks count here. If an initiative becomes an official task, its work is scored in Delivery instead.

6.1 Useful workshop contribution (25%)

Real help with fabrication, assembly, tidying, safety or organisation in the workshop, based on the workshop log.

MARK /5	DEFINITION
0	Had workshop access and never came.
1	Present but barely helps.
2	Occasional help.
3	Regular help on simple tasks.
4	Important contribution to assembly, tidying or preparation.
5	Critical contribution: fabrication, organisation or solving a workshop problem.

6.2 Event engagement and representation (20%)

Trade shows, TV, visits, networking, communication and representation of the team.

MARK /5	DEFINITION
0	Events were open to the member; no engagement.
1	Present but passive.
2	Simple participation.
3	Useful participation.
4	Active organisation or representation.
5	Strong impact: sponsor, visibility or important relationship obtained.

6.3 Logistics support (bonus, up to +10)

Trips and logistical help for the workshop, parts, suppliers, transport and administrative procedures, based on the ERP record. Help that needs no vehicle counts equally: supplier follow-up, paperwork, organising a delivery.

MARK /5	DEFINITION
0	No logistical help (no penalty).
1	Rare and hardly useful help.
2	A few simple trips or errands.
3	Useful but occasional logistical help.
4	Regular logistical help for the workshop, parts or suppliers.
5	Critical logistical help that unblocked the project.

6.4 Exceptional effort (bonus, up to +10)

Exceptional effort in time or availability in a situation that mattered to the project. It must be measurable: dates and hours recorded in the ERP. Effort without evidence cannot be marked above 2.

MARK /5	DEFINITION
0	No extra effort (no penalty).
1	Low extra effort.
2	Occasional extra effort.
3	Regular effort beyond obligations.
4	Important extra effort at a demanding time.
5	Exceptional effort in a critical situation.

Limits. Personal money spent for the team is reimbursed where possible and is never scored. Missing an exam or a class, or working through the night, earns no mark. This bonus recognises effort; it must not reward members for harming their studies or health.

7. Final score, ranking and categories

Final score = 0.55 × Delivery + 0.15 × Presence + 0.15 × Reliability + 0.15 × Team Contribution

If a part is not calculable, Final score = Σ (weight × part score) ÷ Σ weights of the calculable parts. The result is marked “provisional”.

7.1 Ranking order

Members are ranked from the highest to the lowest Ranking score (section 1.1). If two members have the same score, the higher Delivery score ranks first, then the higher Team Contribution score. Members still equal share the same rank.

7.2 Final categories

RANKING SCORE	CATEGORY	POSSIBLE DECISION
85 to 100	A — Excellent	Key member: priority for responsibilities, trips, certificates and representation. Also requires an average Load score of at least 60.
70 to less than 85	B — Very good	Reliable member: important tasks and active role.
55 to less than 70	C — Average	Useful member, but improvement is needed.
40 to less than 55	D — Weak	Close follow-up, or reassignment to a more suitable role.
Less than 40	E — Critical	Refocusing, pause or replacement depending on the situation, decided case by case by the committee.

A member who meets the score for category A but not the Load requirement is placed in category B.

> The ranking should be used to support project decisions, recognition, responsibility allocation and development. It should not automatically trigger disciplinary action. A first month in category D or E leads to a conversation with the Department Head, not to a decision.
