Team Manager – ERP Requirements

1 Team Manager Dashboard

The ERP should provide a dedicated Team Manager dashboard giving a real-time overview of the team's organizational situation.

1.1 Main indicators

The dashboard should display:

- Number of active members.
- Number of inactive or potentially inactive members.
- Attendance rate.
- Task completion rate.
- Number of overdue tasks.
- Number of blocked tasks.
- Number of critical tasks.
- Number of members without active objectives.
- Number of unresolved blockers.

The dashboard should use a simple status system such as:

GREEN = On track	ORANGE = Attention required	RED = Critical

2 Member Management

The ERP should maintain a complete profile for every member.
Each member profile should contain:

- Name and contact information.
- Department.
- Current role.
- Responsibilities.
- Current objectives.
- Assigned tasks.
- Task completion history.
- Attendance history.
- Contribution history.
- Training history.
- Current status: Active / Inactive / At Risk.

3 Attendance and Engagement Tracking

The ERP should allow the Team Manager to track:

- Department meetings.
- General team meetings.
- Workshops.
- Important events.
- Training sessions.

4 Objectives and Task Tracking

The Team Manager should have access to the team's objectives and tasks.
Each task should contain:

- Task title.
- Responsible member(s).
- Department.
- Start date.
- Deadline.
- Current status.
- Importance.
- Complexity.
- Expected deliverable.
- Actual deliverable.
- Quality assessment.
- Blockers.
- Dependencies.
- Evidence or proof of completion.

Possible task statuses:

Planned	In Progress	Submitted	Validated / Needs Revision

The system should automatically identify overdue and blocked tasks.

5 Team Health and Early Warning System

One of the most important functions of the ERP should be an early-warning system.
The system should automatically flag situations such as:

- Member has multiple overdue tasks.
- Member has been inactive for a significant period.
- Critical task is blocked.
- Department has several overdue critical tasks.
- One member owns too much critical knowledge.
- Member workload is significantly above capacity.
- Deadline is approaching while important tasks remain incomplete.

6 Blockers and Dependencies

The ERP should include a dedicated blocker system.
Each blocker should contain:

- Description.
- Affected task.
- Responsible person.
- Responsible department.
- Origin of the blocker.
- Date reported.
- Severity.
- Dependency.
- Required action.
- Person responsible for solving it.
- Resolution date.
- Final status.

Severity levels may be:

Low	Medium	High	Critical

7 Department Coordination

The Team Manager should have a global view of all departments.
For each department, the ERP should provide:

- Number of active members.
- Department objectives.
- Completed tasks.
- Ongoing tasks.
- Delayed tasks.
- Critical tasks.
- Current blockers.

8 Member Performance and Contribution

The system should consider:

- Task completion.
- Task importance.
- Task quality.
- Reliability.

9 Knowledge Management

The ERP should include a structured knowledge repository.
Possible categories:

- Team management.
- Mechanical.
- Electronics.
- Aerodynamics.
- Software.
- Manufacturing.
- Sponsoring.
- Competition.
- Administration.
- Previous projects.

Important documents, procedures, tutorials, reports and lessons learned should be linked to the appropriate department or project.

10 Lessons Learned Database

The ERP should provide a lessons-learned system.
Each entry should contain:

- Problem.
- Context.
- Root cause.
- Solution.
- Result.
- What should be done differently next time.
- Responsible department.

11 Reports Generated

11.1 Weekly Team Report

The report should contain:

- Overall team status.
- Important achievements.
- Delayed tasks.
- Critical blockers.
- Members requiring attention.
- Department status.
- Workload problems.
- Main risks.
- Priorities for the following week.

11.2 Monthly Performance Report

The report should contain:

- Member contribution.
- Department performance.
- Attendance and engagement trends.
- Task completion trends.
- Major blockers.
- Development progress.
- Organizational risks.

The reports should be exportable in PDF or spreadsheet format.

The Team Manager module should therefore be organized as follows:

Module	Main Purpose
Members	Manage member information
Attendance	Track engagement
Objectives & Tasks	Track actual work
Performance	Evaluate contribution
Team Health	Monitor organizational health
Blockers	Detect and resolve problems
Departments	Coordinate departments
Knowledge	Preserve team knowledge
Lessons Learned	Prevent repeated mistakes
Risks	Monitor organizational risks
Reports	Generate management intelligence
